

ARE YOUR TURF AREAS & SPORTSFIELDS HARD, COMPACTED & TURN PATCHY & DUSTY WHEN IT DOESN'T RAIN?

START YOUR ECO FRIENDLY RENOVATION PROGRAM TODAY!

HIGH use, high traffic turf areas are one of the most challenging to maintain a good surface year after year and we have responded to requests for a **“complete” package** when it comes to turf area maintenance for strong, robust turf year after year.

Gone are the days of, over sowing seed, high nitrogen fertiliser & the flooding of ovals as a renovation program.

Our **Soil Nutrition Diagnostics™** report means we diagnose your soil fertility and deficiencies using **laboratory testing** of your soil. **Custom** fertiliser blends will supplement your soil to address the **deficiencies**, based on your laboratory data, and our **comprehensive report and training back up** will ensure you can develop your own fertiliser program for your **specific** requirement.

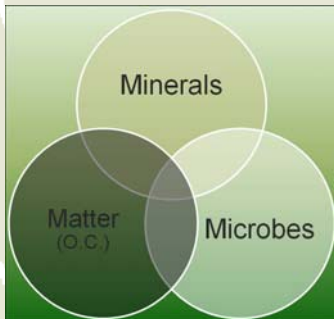

Soil & Turf nutrition is only part of the process!

Constant weed problems? Wear and Tear and Compaction are major stresses on any turf area and many **weeds love acid compacted** soil.

We have teamed up with turf maintenance specialists from the **AFL Queensland** who look after & maintain many sports fields and parks in South East Queensland. Their knowledge of turf maintenance from **Laying, Aeration, and Cutting to Irrigation installation** is first rate to advise you of what's required and best practice for your situation.

“The holistic, eco friendly approach to turf care may be a new approach for many curators but the AFLQ is committed to sustainable turf management and water reduction.”
 Nick Jeffrey
 AFLQ Facility manager

Healthy turf with excellent root systems requires less water & maintenance.

A key to healthy turf is a **management** of soil minerals, organic matter and biology. This, coupled with the physical **implementation** and maintenance leads to healthy roots and a tough durable playing surface.

Identify your challenges, develop a strategy and commence implementation.

Southport Sharks AFL field aerated, treated, topdressed and levelled.
