

RESOLVE YOUR GARDEN PROBLEMS..... NATURALLY.

“PLANT OF HEALTH” PRODUCTS RETURNS BEAUTIFUL GARDEN DISPLAYS AT SANDGATE MEMORIAL PARK.

At Memorial Park in Sandgate, Brisbane, the team always time their floral displays to be at peak on ANZAC DAY and REMEMBERANCE DAY . Over the last two years problems developed and the plants were simply not performing. “We tried lots of things and different fertilizers to no avail. In desperation we even replaced the top soil in an effort to get the annuals blooming. We would cheer if we found an earthworm. We were starting to think the seedlings had fungal infections.” Gary Houghton BCC

Batphone were employed to review the processes and situation. A comprehensive soil test-**SOIL NUTRITION™** service was performed which highlighted a few minor deficiencies in otherwise quite good soil. It also highlighted a massive amount of phosphate severely undermining the “natural balance” of the soil. We recommended a fertilizer program designed to correct the imbalances, to increase soil fertility and to support the natural processes. The program included, foliar sprays Plant Care, Silica, Triple Boost and Organic Link slow release fertiliser.

Over the next 12 months, the plants steadily improved with the highlight being 1 year after the initial soil test and program introduction (Anzac Day 2005).

“The plants are excellent. We had to keep budding them so they wouldn’t bloom too early for ANZAC DAY. We are entering the park in the Brisbane City Council Competition. Best of all the soil is now teeming with earthworms.” Any garden will benefit from regular applications of PLANT of HEALTH products.

**brilliant.... naturally!**
